EDUCATION

University of California, Los Angeles (UCLA) — **Los Angeles, CA**

Bachelor of Science, Computer Science — ***Expected Jun 2029***

Relevant Coursework: Data Structures & Algorithms, Computer Organization, Discrete Structures; Algorithms & Complexity

EXPERIENCE

Co-Founder & Founding AI Engineer — ***Jul 2023 - Present***

ContextForce | *Los Angeles, CA*

- Improved execution reliability across 20+ production AI workflows by building a multi-provider routing layer with model fallback, API-key failover, and retries that stopped once a response had been finalized.
- Engineered tool-calling travel agents that searched flights, hotels, activities, and points of interest through MCP, then converted results into structured, validated responses and interactive UI components.
- Built an automated LLM evaluation framework using weighted rubrics, latency and cost benchmarks, and regression fixtures to compare models and prevent workflow-quality regressions.
- Led product and pricing strategy across a portfolio of AI products and translated enterprise discovery feedback into requirements for the company's extraction platform.

Selected products developed under ContextForce:

Forty Pirates: Mobile App

React Native, Expo, TypeScript, MapLibre GL, better-auth

- Built the consumer mobile layer for ContextForce's reusable AI infrastructure, turning extracted social content into structured locations, recommendations, tasks, and trip plans.
- Integrated ContextForce's multimodal extraction backend into the mobile capture workflow and implemented Google, Apple, and email/password authentication, tracing an OAuth failure to redirect parameters dropped between services.
- Implemented persistent trip and itinerary planning, connected third-party activity booking data, and designed the first-time onboarding flow.
- Established automated CI validation before deployment and coordinated iterative QA cycles with two testers to verify features, reproduce defects, and regression-test fixes.

LEXI: AI-Powered Chrome Extension

Chrome Extension APIs, JavaScript, LLM Integration

- Published an AI-powered extension to the Chrome Web Store, embedding YouTube insights, GitHub code recognition, and webpage content extraction directly into the browsing experience across YouTube and X.com.
- Designed a privacy-first architecture using IndexedDB for local storage, with configurable prompt management and a metered usage system.

PDF-to-Markdown Pipeline

Python, Groq, vision-language models, Cloudflare Workers

- Built and deployed a PDF-to-Markdown API that uses OCR and vision-language models to preserve document structure, tables, links, and LaTeX; released a Python SDK for programmatic use.

Tech Board Member — ***Oct 2025 - Present***

Creative Labs *@ UCLA | Los Angeles, CA*

- Migrated project data for 40+ external project teams from hardcoded JSON to Supabase and co-developed a membership portal integrating GitHub activity, project administration, and task delegation.

SELECTED PROJECTS

Plan My Courses – an Interactive Degree Planner — ***Jun 2025 – Present***

JavaScript, Graph Algorithms

- Reduced quarter-planning time by 80% in tests with 30+ UCLA students by modeling prerequisites as a dependency graph and ranking eligible courses with a priority-scoring algorithm.
- Shipped validation for prerequisites, corequisites, unit limits, and graduation feasibility, along with multi-plan generation for comparing alternative schedules.

et al. – an MCP-native personal operating system — ***Jul 2026 - Present***

TypeScript, Cloudflare Workers/D1/R2/Vectorize, Workers AI, MCP, Hono, Zod

- Architected a personal workspace that exposes structured MCP tools for AI agents to search and propose actions across a user's projects, documents, and tasks.
- Designed an auditable approval system with agent attribution and a Git-style review flow, requiring users to accept AI-generated changes before they modify stored data.
- Added semantic workspace search and a mobile sharing workflow that lets users save external content from other apps and retrieve it later through natural-language requests.

SKILLS & AWARDS

Languages: *Python, TypeScript/JavaScript, Java, SQL, HTML/CSS*
AI Systems: *Agent orchestration, tool calling, MCP, RAG, vector search, LLM evaluation, model routing*
Frameworks & Cloud: *React, React Native, Node.js, Hono, Expo, Cloudflare Workers/D1/R2/Vectorize, Supabase, Pinecone*
Human Languages: *English, Cantonese*

Awards*: NCWIT Award for Aspirations in Computing (2024)*
